

SCOTT + REID
General Contractors

LEED / Green Advantage

Scott + Reid is committed to the ever-increasing demands related to environmental issues, and we understand our clients' desires to achieve LEED certification on their construction projects. To assist in this effort, Scott + Reid has encouraged all of our Project Managers, Project Assistants and Project Superintendents to become Green Advantage Certified. What does this mean for our clients? A Green Advantage construction team can qualify for one LEED Innovation Credit, helping the project reach its overall goal of LEED certification.

Scott + Reid's immediate goal is to have all of its Project Managers, Project Assistants, and Project Superintendents Green Advantage Certified. We currently have 90% of our team who are already Green Advantage Certified.

In addition to being Green Advantage Certified, Scott + Reid now has three Project Managers that have achieved their LEED Professional Accreditation, as well as one LEED Consultant on staff. We have a large number of Project Managers, Project Assistants, and Superintendents that have taken the LEED AP class and will test for their accreditation the coming months.

Energy Future Holdings
190,000 Square Feet

Scott + Reid recently completed two high-profile projects that each consisted of a LEED component. The first project was for Energy Future Holdings and included the restack of 190,000 square feet at their corporate office downtown Dallas. This project is expected to be the first LEED-CI Gold Certified project in a commercial high rise structure in the State of Texas. The second project was for our client TXU, and included the complete renovation of three floors, totaling 250,000 square feet. This project has applied for a LEED CI-Silver Certification.
